

NRCB Intercommunity Relief Sewer

Location: Northeast, Ohio
Completion: 1997

Client: Northeast Ohio Regional Sewer District
3826 Euclid Avenue
Cleveland, Ohio 44115-2504

Services: Design
Bidding
Construction Inspection
Construction Administration

The Northeast Ohio Regional Sewer District developed a comprehensive sanitary sewer plan of its member communities. The plan's recommendations are a series of intercommunity relief sewers (ICRS) designed to convey a prescribed permit flow.

This project was divided into two (2) contracts; the Cranbrook Drive/Bonnieview Road ICRS and the Noble Road/Runnymede Boulevard ICRS. CT provided detail design and construction administration services including resident project representation, operation and maintenance manual and project performance certification.

The contract provided relief to existing and proposed sanitary sewers by intercepting flows at the NEORS D interceptor.
