CT Consultants Inc., headquartered in Mentor, Ohio, continues to advance its growth strategy through the addition of staff and market services. The company founded in 1922 provides comprehensive civil engineering services. Today, the growing civil engineering company announces the merger of EG&G Inc located in Fairlawn, Ohio. With this transaction, CT has significantly expanded the firm's service oriented markets and geographic markets. EG&G, now a Division of CT Consultants, provides specialized design services and creative funding strategies for community improvement projects that help transform downtowns, neighborhoods and parks into revitalized civic assets. "The merger was due to a shared vision to provide professional services that integrates aesthetic, functional and economic factors to enhance our role as stewards of public infrastructure." said Dave Wiles, President of CT.

In the fall of 2012, CT completed the acquisition of Floyd Browne Group, a civil engineering firm providing comprehensive water and wastewater engineering design services. The combination of the Floyd Browne acquisition and now the EG&G merger expands CT's portfolio of services and moves the company into different geographic markets. With these two transactions staff levels have increased more than 50% within the last year. "We are delighted to formalize the merger of such a talented and well-accomplished firm in EG&G." said Dave Wiles, President of CT. "The combined experience and skills of the two firms will allow CT to continue our long record of success."

About CT Consultants - CT Consultants is comprised of more than 150 engineers, architects and planners dedicated to delivering quality services to clients for over 90 years. The Municipal/Civil Engineering Division is responsible for managing local government and private client projects; several of these clients have contracted services with CT for more than 50 years. The Transportation Division includes staff that is ODOT prequalified and currently under contract for numerous bridge and roadway projects both at the District and State level. CT's Water and Wastewater Division is a leader in the design and construction of state of the art technology. The firm's in-house Construction Division maintains an in-depth staff of inspectors, project engineers and program managers for complete project delivery.

CT Consultants has grown by continuing the core philosophy to nurture long term service relationships with clients while carefully delivering specific project requirements. The root of the firm's approach originates in 1922 when Frank A. Thomas left his position as Village Engineer in Euclid, Ohio to start an organization that would provide a broad range of engineering services to assist municipalities. CT is now providing the same level of detailed service throughout an expanding domestic market area and in offices located in Europe.

About EG&G Inc. - For more than 31 years, EG&G Inc has effectively coordinated, worked and reached consensus with all the various project stakeholders, public and private sector, to successfully realize award-winning community improvement projects for client communities. Moreover, financial plan development and grant-writing are integral services offered that leads to the implementation of community improvement projects.

EG&G's community improvement projects, particularly downtown revitalization and streetscape projects, are noted for their design excellence as well as their measurable results. Hundreds of successfully planned, designed and implemented projects have been completed by the firm, including projects in which were distinguished with the Great American Main Street award from the Main Street Center of the National Trust for Historic Preservation.
