### **CT Consultants, a Verdantas Company, Recognizes Staff Promotion**

Mentor, OH - Jennifer Brown has been promoted to **Client Development Lead** at CT Consultants, a Verdantas Company. In this leadership role, Jennifer will be focused on growing our account footprint in the Great Lakes Region and furthering the development and delivery of successful strategies to achieve our growth goals.

Jennifer, a shareholder of the firm, has previously served as an economic development, project development and funding strategist for CT. She assisted clients in the development and implementation and conformance of capital improvement projects. She also served as Talent Leader for the Northeast Ohio Water Market, where she was engaged in staff's professional development and market production needs.

"Jennifer's experience serving local governments has contributed to her unique style cultivating trusted relationships with clients. This experience and expertise coupled with her ability to lead teams with empathy, while empowering us to reach for higher success, has earned her this vital role as Client Development Lead for the CT Area." Diane Oress, Executive Vice President, CT Consultants.

Verdantas and CT joined forces in April to elevate our combined expertise in water and wastewater systems engineering and to bolster municipal and transportation engineering capabilities throughout Ohio and Pennsylvania. This strategic collaboration builds upon the complementary client portfolios of both firms, particularly in the public sector, unlocking new opportunities for organic growth. CT Consultants remains true to our founding philosophy — to serve every client in distinctive and unique ways. This tradition of personally tailored and exceptional client service has long been the key to our core business. We deliver smart, sustainable design solutions that help shape the present and prepare our clients for the future.

#### ***About Verdantas***

Verdantas specializes in delivering an integrated mix of environmental consulting, sustainable engineering, modeling, and cutting-edge digital technology to support markets with secular tailwinds and foster sustainable project outcomes. Our expertise spans power projects including renewables, water resources, government related land use and remediation as well as traditional transportation infrastructure projects. Our team of more than 1,400 professionals, consisting of environmental scientists, engineers, geologists, and technical specialists, collaborates closely with clients, utilizing advanced technology to deliver precise datasets and models for complex environmental and infrastructure challenges. Functioning as strategic partners, we assist clients in achieving their infrastructure and sustainability objectives. Grounded in a people-focused culture, Verdantas prioritizes the well-being of our employees, clients, and communities we serve.
